Experience harman/kardon LOGIC 7™

The Range Rover harman/kardon LOGIC 7™ system offers a powerful solution to achieving truly universal multi-channel audio playback. The ingenious 7.1 channel playback matrix is absolutely stereo compatible and allows all two channel material to play in thrilling multi-channel 'surround'.

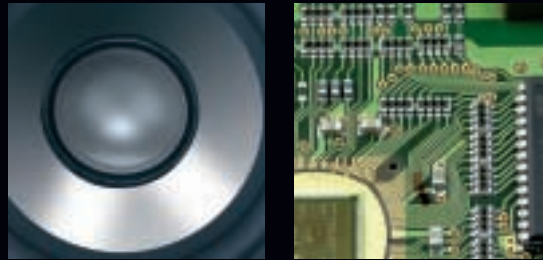

This Harman patented processing technology extracts and recreates all the subtle details and the full musical balance the recording engineer created in the original master, reproducing the soundtrack exactly as it was intended to be heard.

More impressively, when coupled to the mobile theatre package LOGIC 7™'s adaptive processing uniquely reproduces all the directional information found on today's multi-channel formatted DVD soundtracks, providing an exceptional rear seat theatre experience.

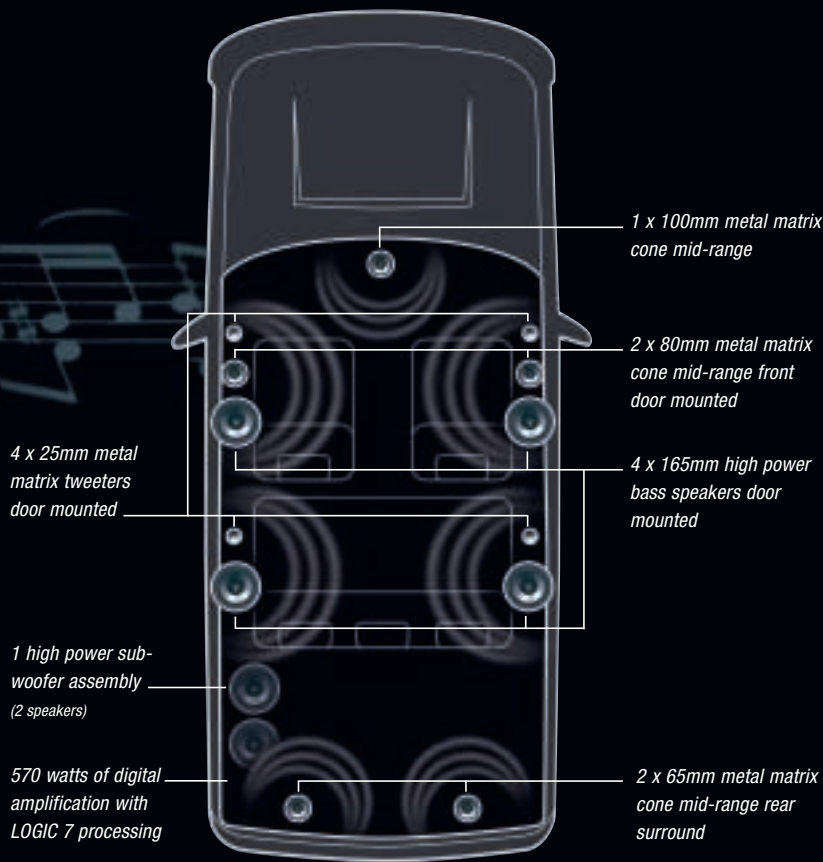

Much more than just another 'room effect', the Range Rover harman/kardon LOGIC 7™ system offers you an unprecedented level of audio realism, unlike anything you've ever heard before.

You may never need to visit the concert hall again.

The computer optimised loudspeakers used to re-produce the seven surround channels are designed to achieve the ultimate fidelity, using Harman patented metal matrix cone technology found in some of the world's leading home theatre products.

Digital Signal Processing provides the same digital resources available to the professional recording engineer, allowing our automotive acousticians to re-master the sound that was originally created in the recording studio.

The harman/kardon LOGIC 7™ audio system on the Range Rover features 15 speaker transducers strategically located in the vehicle to maximise the audio experience.

The clarity of the high performance tweeters in each door is unsurpassed in the automotive world. With spacial and spectral presentation delivered with the use of 5 mid-range metal matrix cone transducers, the vehicle occupants are immersed in the audio experience.

The superb tight performance of the bass is achieved with high power/high performance bass speakers positioned in each of the doors and the deep extension is supplemented with the use of a rear quarter mounted high power sub-woofer system.

Full control of the system is achieved through 570 watts of digital amplification, delivering both power and control together with the unique processing capability of LOGIC 7™.

Art and technology in harmony to deliver a truly unforgettable experience.
